1. Introduction

As part of discussion at the Examination into the Cambridge Submission Local Plan and South Cambridgeshire Submission Local Plan, the Councils were asked to provide additional information on the Modelling Summary Report (RD/Strat/160) that was developed during the preparation of the Local Plans, using the Cambridge Sub Regional Model (CSRM).

A statement was published by the Councils (M7CCC&SCDC – Supplement 2), which provided information on:

- The Validation Report for the CSRM Model
- Assumptions used in the model runs referred to in the CSRM Modelling Report (CSRM Modelling Summary Report for Cambridge and South Cambridgeshire Local Plans – July 2013 RD/Strat/160)
- How the Cambridge Western Orbital was applied in the CSRM Model run referenced in the Modelling Report.

For completeness this is attached at appendix A, of this Note, and it is also available here:

<https://www.cambridge.gov.uk/sites/www.cambridge.gov.uk/files/documents/M7%20supplement%20%20-%20Re-run%20Modelling.pdf>

A Further Supplement was published by the Councils on 31 March 2015 (M7CCC&SCDC – Supplement 3), providing further information which addressed some apparent inconsistencies concerning housing numbers in the phase 3 model run. This supplement is attached at appendix B of this note, and is also available here:

<https://www.cambridge.gov.uk/sites/www.cambridge.gov.uk/files/documents/M7%20supplement%20-%20Re-run%20Modelling.pdf>

A revised version of the Modelling Summary Report was produced to show the impact of the changes (RD/Strat/161), which accompanied the supplement.

This document provides further technical information from the CSRM model runs which supported the local plans.

Unless explicitly stated otherwise, all information provided in this note referencing the Do Something (DS) model relates to the March 2015 Phase 3 re-run (Scenario K2) , reported in the Supplement to the Councils Written Statement to Matter 7 (M7/CCC & SCDC – SUPPLEMENT 3), with the accompanying Modelling Report Update (CSRM Modelling Summary Report for Cambridge and South Cambridgeshire Local Plans – March 2015 RD/Strat/161).

2. CSRM Modelling Summary Reports

This section provides further clarification of information found in the CSRM Modelling Summary Reports (RD/Strat/160 & RD/Strat/161).

2.1. Change in Trips by Travel Mode

Page 9 of the CSRM Modelling Summary Report for Cambridge and South Cambridgeshire Local Plans – March 2015 (RD/Strat/161) includes a table illustrating the increase in travel demand anticipated between 2011 and 2031 by transport mode across the Sub Region.

Table 1 below provides the absolute figures supporting this table. The figures show the change in the total trips by mode between 2011 and 2031 for each CSRM Scenario. It should be noted that the time periods are as follows: AM 7am-10am, IP 10am-4pm, PM 4pm-7pm.

Table 1. Total Trips by mode (2011 to 2031)

| | | Active | Car | PT | Grand Total |
|---------------------------------|----|----------------|------------------|----------------|------------------|
| 2011 | AM | 155,811 | 261,004 | 33,052 | 449,867 |
| | IP | 253,107 | 477,381 | 29,943 | 760,430 |
| | PM | 108,642 | 299,216 | 25,301 | 433,159 |
| Total | | 517,560 | 1,037,601 | 88,296 | 1,643,456 |
| 2031 Without Transport Strategy | AM | 192,748 | 316,611 | 39,537 | 548,896 |
| | IP | 311,681 | 603,615 | 36,125 | 951,421 |
| | PM | 133,489 | 370,992 | 30,954 | 535,435 |
| Total | | 637,918 | 1,291,219 | 106,616 | 2,035,752 |
| 2031 With Transport Strategy | AM | 193,559 | 314,348 | 41,963 | 549,871 |
| | IP | 312,996 | 598,377 | 38,217 | 949,591 |
| | PM | 133,860 | 368,569 | 32,896 | 535,324 |
| Total | | 640,416 | 1,281,294 | 113,076 | 2,034,786 |

Table 2 below shows the absolute figures for movements by all travel modes between Cambridge, South Cambridgeshire and elsewhere. These are the totals for the AM, IP and PM periods (7am-7pm) for all modes, including walk and cycle.

Table 2. Origin and Destination of Trips (total for all modes)

| | Origin | Destination | | | Total |
|---------------------------------|----------------------|----------------|----------------------|----------------|------------------|
| | | Cambridge | South Cambridgeshire | Elsewhere | |
| 2011 | Cambridge | 279,503 | 75,339 | 42,008 | 396,850 |
| | South Cambridgeshire | 82,530 | 228,624 | 114,204 | 425,358 |
| | Elsewhere | 45,312 | 112,923 | 663,012 | 821,248 |
| | Total | 407,345 | 416,886 | 819,225 | 1,643,456 |
| 2031 Without Transport Strategy | Cambridge | 363,392 | 99,272 | 50,940 | 513,604 |
| | South Cambridgeshire | 109,219 | 307,477 | 140,904 | 557,600 |
| | Elsewhere | 56,293 | 142,284 | 765,972 | 964,549 |
| | Total | 528,904 | 549,033 | 957,816 | 2,035,752 |

| | Origin | Destination | | | Total |
|------------------------------|----------------------|----------------|----------------------|----------------|------------------|
| | | Cambridge | South Cambridgeshire | Elsewhere | |
| 2031 With Transport Strategy | Cambridge | 359,804 | 100,709 | 51,910 | 512,424 |
| | South Cambridgeshire | 110,502 | 304,258 | 142,390 | 557,150 |
| | Elsewhere | 56,934 | 143,362 | 764,915 | 965,212 |
| | Total | 527,241 | 548,330 | 959,215 | 2,034,786 |

2.2. Transport Scheme Phasing

This section identifies the phasing assumptions for transport schemes that was used in the transport modelling. The information below is drawn from Appendix B of the CSRM Modelling Summary Report (RD/Strat/160 & RD/Strat/161).

Highways

Table B.1 in Appendix B of the CSRM Modelling Summary Report details the highway schemes included as part of the transport measures. Table 3 below highlights the schemes related to the A14 and the A10. It also indicates assumptions regarding the timing of delivery.

Table 3. Assumptions regarding the A14 upgrade, and highway measures for the A10 highway scheme phasing

| Highway Scheme | Description |
|--|---|
| A14 Ellington to Milton improvement scheme | Included in all phases of modelling from 2021 onwards. |
| A10 dualled between Cambridge Research Park and A14 Milton Interchange | Included in the Phase 2 modelling from 2021 onwards. The highway scheme is not included in the Phase 3 modelling due to the profile and scale of development up to 2031. The public transport measures were prioritised before further highway mitigation (expected to be post 2031). |

Public Transport and Cycling Schemes

The cycling enhancements included in transport measures are listed in table B.2, and illustrated in Figure B.3 of Appendix B of the CSRM Modelling Summary Report (RD/Strat/160 & RD/Strat/161). Figure B.3 also includes the timing assumptions, with the colours of the routes on the map indicating the different timing assumptions.

Public transport schemes included in the transport measures are listed in Table B2 of the CSRM Modelling Summary Report (RD/Strat/160 & RD/Strat/161). The modelling assumed that all public transport upgrades (bus, rail and park & ride) were in place by 2021, with some being introduced by 2016. This may not reflect the timing of the individual schemes which evolved subsequent to the modelling, particularly through the City Deal prioritisation to support delivery. The analysis focused on 2031 (when all schemes should be in place).

2.3. Model back-filling

Section 2.1 of the CSRM Modelling Summary Report (RD/Strat/160 & RD/Strat/161) referred to 'back filling'. When road space on congested routes is freed up by, for example developing in more sustainable locations or through change in travel mode, some of the benefit is eroded as suppressed demands released and takes up the space created. This section of this report provides further information on this process.

The transport modelling that underpins the local plan assumes journey makers use logic and judgement to find routes, modes and travel options that minimise their respective travel costs. The land use model also considers a bigger picture of trade-offs between location of residence/employment and other services by

considering housing costs and travel costs to differing types of essential services (including jobs and education).

Where development is focused on more sustainable locations, with good access to alternative modes of transport, there are four basic consequences, which are reflected in the model:

- 1.) Overall trip lengths in the modelled area can be shortened, as those people who would otherwise travel from more distant locations are now making shortened movements from the additional dwellings in more sustainable locations;
- 2.) This reduction in trips (many of which by car) means there will be “short term” spare capacity liberated on transport links in the outer areas and routes to the main areas of employment and services, where movement is focussed towards;
- 3.) The mode share of the occupants in more sustainable locations tends to be more biased towards more sustainable modes, which could free up road capacity compared to more dispersed development patterns; and
- 4.) There will be a tendency for potentially reduced congestion and hence a reduction in travel times for certain groups of users, particularly those travelling to the main areas of employment and services.

Being a transport system which always strive for equilibrium, these changes in conditions would only be short term. In practice people (and the responses tailored in the model) assumes trip makers will continue to seek out minimum cost routes and rebalance their locational and mode choices accordingly. Hence the rebalancing would have 2 primary effects:

- a.) Any reduced congestion for all other existing areas beyond the development will mean there is scope for more and slightly longer distance travel by car (i.e. the remaining outlying residents have a slightly higher tendency to travel by car to the main areas of employment and services);
- b.) There may be some contraction of peak spreading leading to a re-intensified peak hour;

However it should also be noted that even in some areas considered to be more sustainable, for example in the region between the fringe developments and larger urban areas, localised congestion might actually increase unless the development impacts are fully mitigated.

2.4. Model Zoning Structure

The Cambridge Sub-Regional Transport Model uses a zoning system to aggregate trip origins and destinations into manageable chunks for modelling purposes. Trip generation across the network is built up from the frequency of trips between zones in the zoning system, representing trip origins and destinations. Zones are more concise closer to the area of study where modelling is more detailed, becoming larger towards the external areas. The total demand from any given zone is loaded onto the modelled network at strategic locations within that zone boundary, providing access to the transport network.

3. Land Use Assumptions

3.1. Land Use Assumptions

The Councils supplementary Statement to the Local Plan Examination Matter 7 (M7/CCC & SCDC – Supplement 3) included information on housing and employment numbers used in the different phases of modelling reported in the Modelling Summary Reports.

The tables in Appendix E of this supplementary technical note provide a further breakdown of the growth in dwellings and employment assumed in the phase 3 model re-run (Scenario K-2). Where possible specific site information on dwellings and employment was applied. Where further growth was anticipated but no specific site was available (e.g. for windfall development), the growth was applied pro rata across the model zones affected.

4. Highway Assumptions

4.1. Sectorised Demand Matrices

In order to provide further background information on the transport movements which CSRM is assuming in the base and future year scenarios, sector-sector summaries have been prepared, and are presented in a spreadsheet at Appendix F. 20 sectors have been defined covering the two districts in detail, and the rest of mainland UK in larger sectors (see maps included in Appendix D). The information has been prepared grouping car trips (including Park & Ride as they generate local car movements), public transport (bus, guided bus and rail) and active (walk and cycle). The tables show the total number of trips which CSRM has produced in 2011, and in 2031 with and without the transport strategy in place.

4.2. Average Journey Lengths

This corresponds to the origin/destination table on page 9 of the CSRM Modelling Summary Report (RD/Strat.160 & RD/Strat.161).

Table 4 below shows the average trip lengths for journeys by car taken from CSRM for 2011 and 2031 with/without the transport strategy. These figures are average trip lengths for trips between each of the district-district pairs shown, weighted according to the number of trips (e.g. Cambridge-Cambridge movements are a mixture of trips between zones in Cambridge of different lengths, as the shorter trips are more common, the weighted average takes this into account).

As expected, the Cambridge-Cambridge trips are shortest, and trips to Cambridge from 'Elsewhere' are the longest. Table 5 expresses the change in average trip length as a percentage of the 2011 figures. This shows that the length of trips to/from destinations outside Cambridge and South Cambridgeshire grows most quickly.

Table 4. Average Trip Lengths (km), Car Trips

| | | To destinations in: | | | |
|---------------------------------|----------------------|---------------------|-------------|-------------|-------------|
| | | Cambridge City | South Cambs | Elsewhere | All Areas |
| 2011 | From origins in: | | | | |
| | Cambridge | 3.5 | 11.3 | 51.9 | 17.2 |
| | South Cambridgeshire | 11.4 | 10.9 | 45.0 | 23.0 |
| | Elsewhere | 50.8 | 43.6 | 29.6 | 33.5 |
| Total | | 17.5 | 22.5 | 33.8 | 28.1 |
| 2031 Without Transport Strategy | From origins in: | | | | |
| | Cambridge | 3.6 | 11.5 | 56.1 | 17.5 |
| | South Cambridgeshire | 11.5 | 10.8 | 47.4 | 23.0 |
| | Elsewhere | 55.3 | 46.0 | 32.2 | 36.3 |
| Total | | 18.1 | 22.8 | 36.5 | 29.4 |
| 2031 With Transport Strategy | From origins in: | | | | |
| | Cambridge | 4.0 | 11.6 | 57.0 | 18.2 |
| | South Cambridgeshire | 11.6 | 10.8 | 47.9 | 23.4 |
| | Elsewhere | 56.1 | 46.4 | 32.3 | 36.6 |
| Total | | 18.6 | 23.1 | 36.8 | 29.8 |

Table 5. Percentage Change in Trip Lengths, Car Trips (2011-2031)

| | | To destinations in: | | | |
|---------------------------------|----------------------|---------------------|-------------|-----------|-----------|
| | From origins in: | Cambridge City | South Cambs | Elsewhere | All Areas |
| 2031 Without Transport Strategy | Cambridge | 3% | 1% | 8% | 2% |
| | South Cambridgeshire | 1% | -2% | 5% | 0% |
| | Elsewhere | 9% | 6% | 9% | 8% |
| | Total | 4% | 1% | 8% | 5% |
| 2031 With Transport Strategy | Cambridge | 13% | 3% | 10% | 5% |
| | South Cambridgeshire | 2% | -2% | 6% | 2% |
| | Elsewhere | 10% | 6% | 9% | 9% |
| | Total | 6% | 3% | 9% | 6% |

The following tables (Table 6 and Table 7) show average trip lengths for public transport trips. The introduction of the transport strategy has the impact of lengthening public transport trips. This will occur because the transport strategy makes travelling by public transport more attractive over long distances, and hence longer trips are encouraged. The improvements to cycling infrastructure may also lead to some shorter bus trips switching to cycling, which would add to this effect.

Table 6. Average Trip Lengths (km), Public Transport

| | | To destinations in: | | | |
|---------------------------------|----------------------|---------------------|-------------|-------------|-------------|
| | From origins in: | Cambridge City | South Cambs | Elsewhere | All Areas |
| 2011 | Cambridge | 4.3 | 13.4 | 52.0 | 19.6 |
| | South Cambridgeshire | 14.0 | 12.6 | 46.0 | 22.7 |
| | Elsewhere | 50.6 | 43.4 | 33.7 | 38.2 |
| | Total | 19.9 | 21.6 | 38.7 | 29.0 |
| 2031 Without Transport Strategy | Cambridge | 4.5 | 13.0 | 61.0 | 22.1 |
| | South Cambridgeshire | 13.5 | 11.8 | 52.6 | 24.0 |
| | Elsewhere | 58.9 | 50.7 | 36.0 | 42.7 |
| | Total | 22.0 | 22.9 | 43.3 | 31.7 |
| 2031 With Transport Strategy | Cambridge | 4.9 | 13.5 | 58.3 | 24.0 |
| | South Cambridgeshire | 13.9 | 12.7 | 51.8 | 23.7 |
| | Elsewhere | 56.6 | 50.0 | 34.9 | 41.7 |
| | Total | 24.0 | 22.9 | 42.2 | 31.9 |

Table 7. Percentage Change in Trip Lengths, Public Transport (2011-2031)

| | | To destinations in: | | | |
|---------------------------------|----------------------|---------------------|-------------|------------|------------|
| From origins in: | | Cambridge City | South Cambs | Elsewhere | All Areas |
| 2031 Without Transport Strategy | Cambridge | 6% | -3% | 17% | 13% |
| | South Cambridgeshire | -3% | -6% | 14% | 6% |
| | Elsewhere | 16% | 17% | 7% | 12% |
| | Total | 10% | 6% | 12% | 10% |
| 2031 With Transport Strategy | Cambridge | 15% | 0% | 12% | 23% |
| | South Cambridgeshire | -1% | 1% | 13% | 5% |
| | Elsewhere | 12% | 15% | 4% | 9% |
| | Total | 21% | 6% | 9% | 10% |

4.3. A428/A1303 Corridor Traffic Volumes and Journey Times

Information on the impact on Journey Times was provided in Appendix E of the CSRM Modelling Summary Report (RD/Strat/160 & RD/Strat.161).

Traffic volumes and journey times for the A428/A1303 corridor have been extracted from the model. Figure 1 below indicates the geographical location on the A428/A1303 corridor where demand and actual traffic volumes have been extracted.

Traffic modelling software frequently utilises a common unit, known as the Passenger Car Unit (PCU), to represent general traffic. Common vehicle types are assigned a conversion factor so that an equivalent PCU value can be generated from vehicle data. In this instance cars and LGVs equate to 1 PCU, whilst HGVs equate to 2.3. Demand flow (PCU/hr) includes all flow components (assigned from the trip matrix) that would like to make a particular trip during the modelled time period, whereas actual flow (PCU/hr) refers to the number of PCUs which actually complete an assigned trip in the model. Actual flow is less than demand flow due to congestion in the modelled network resulting in some trips not being completed within the modelled time period.

Figure 1. M11 screenline location

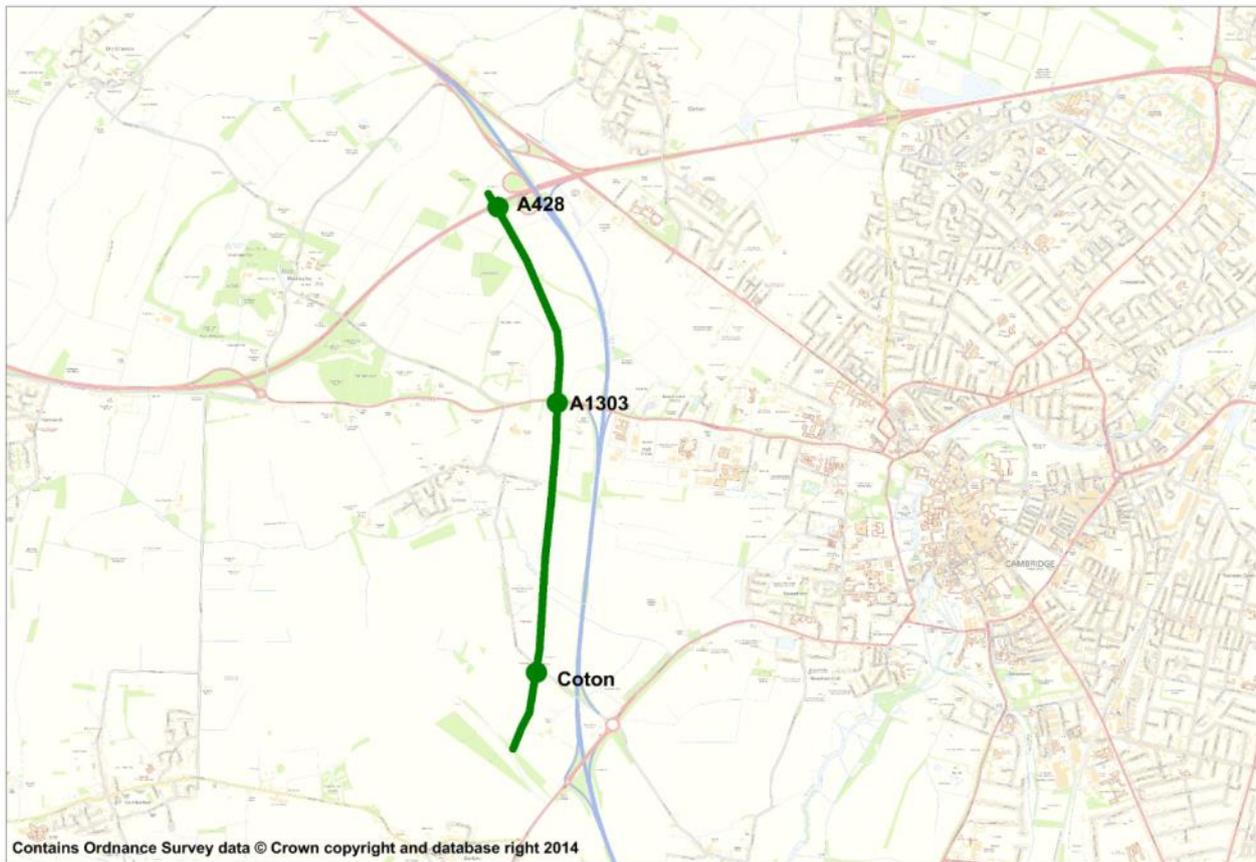

Figure 2 and Figure 3 show the total highway demand and actual flows for the A428/A1303 corridor in correspondence with the M11 screenline.

Figure 2. 2031 Do Something A428/A1303 corridor actual and demand flow (towards Cambridge)

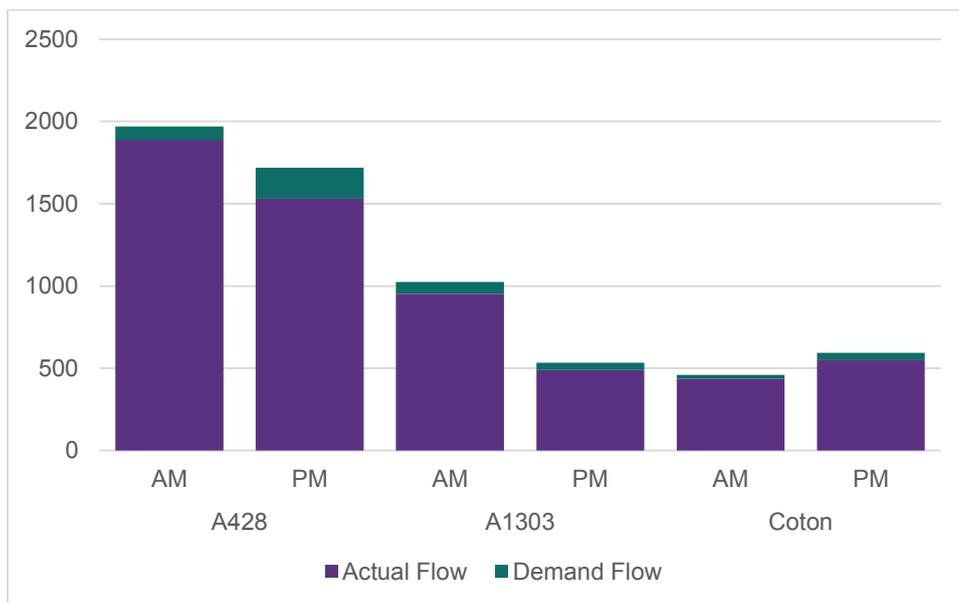

Figure 3. 2031 Do Something A428/A1303 corridor actual and demand flow (from Cambridge)

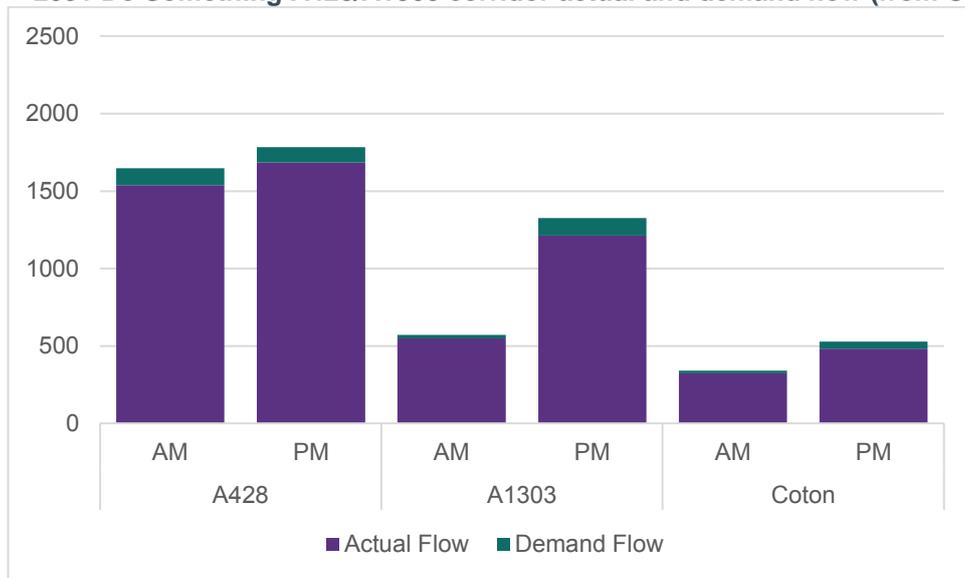

Figure 4 identifies three journey time routes for the A428/A1303 corridor.

Figure 4. Journey time routes

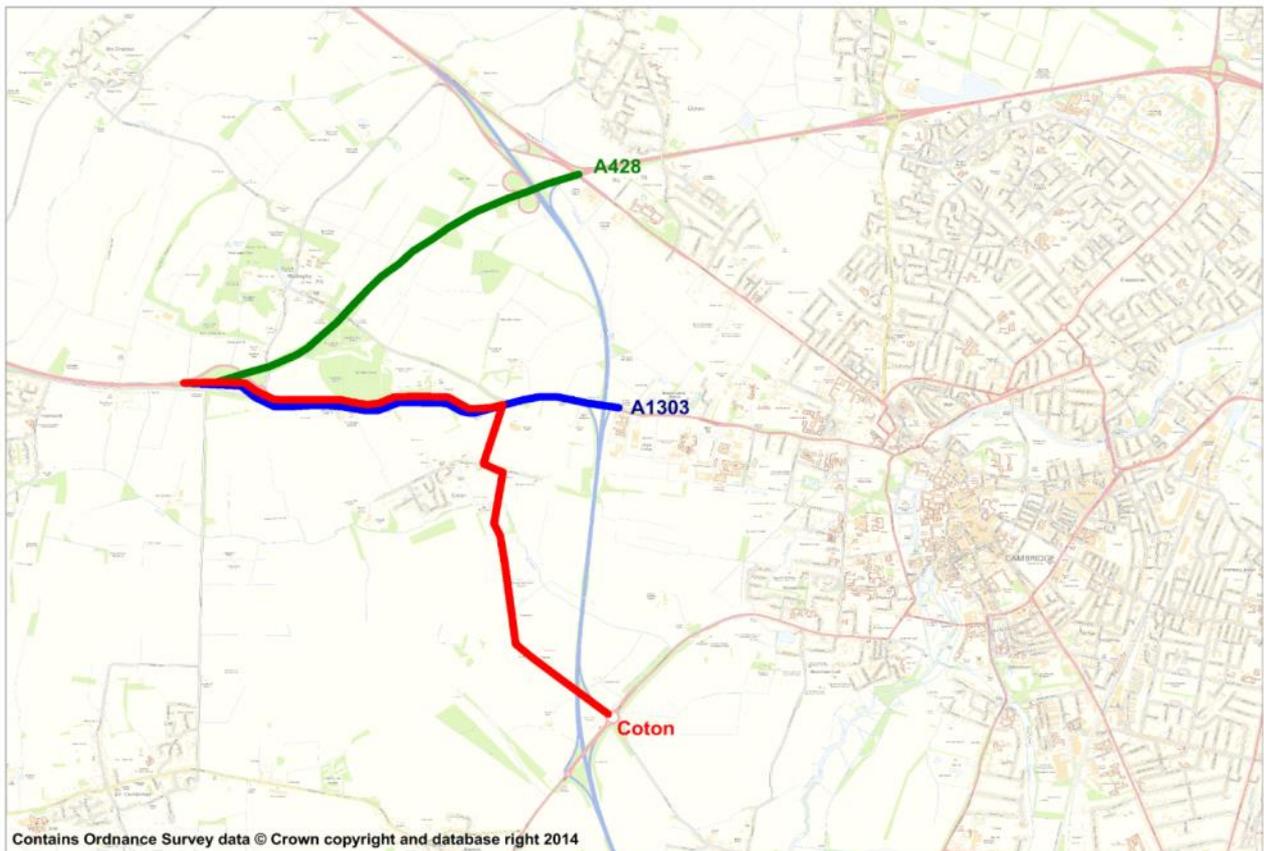

Figure 5 and Figure 6 indicate the total time taken to travel each journey time route in the AM and PM peak hour.

Figure 5. 2031 Do Something A428/A1303 corridor journey time routes (towards Cambridge)

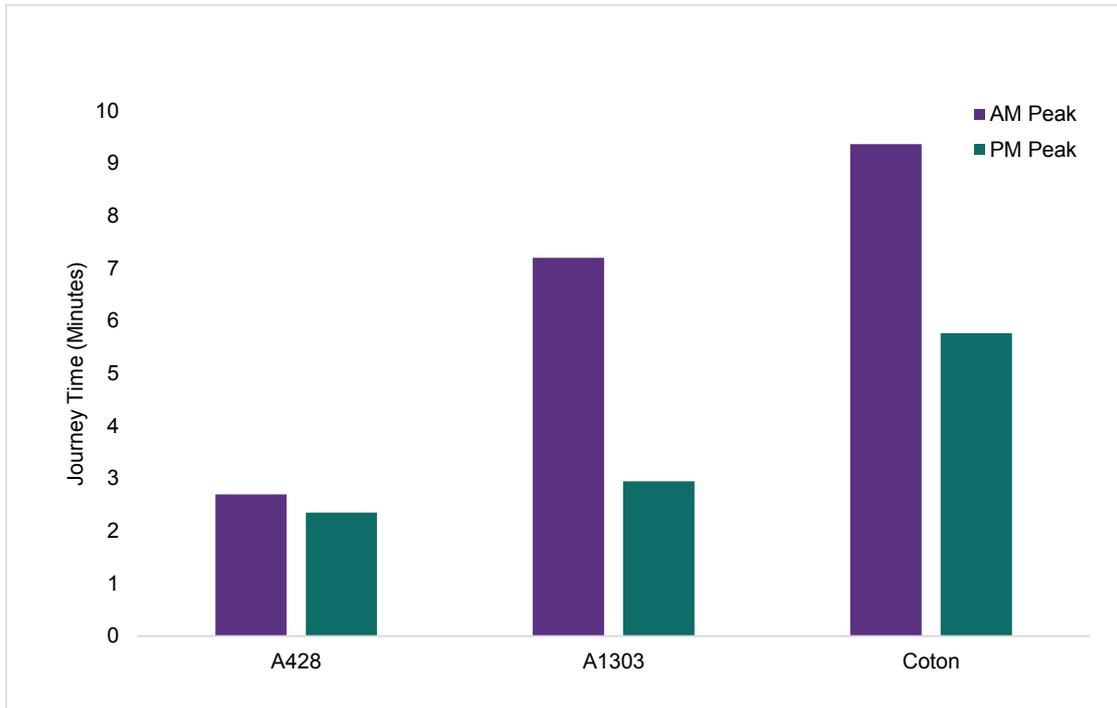

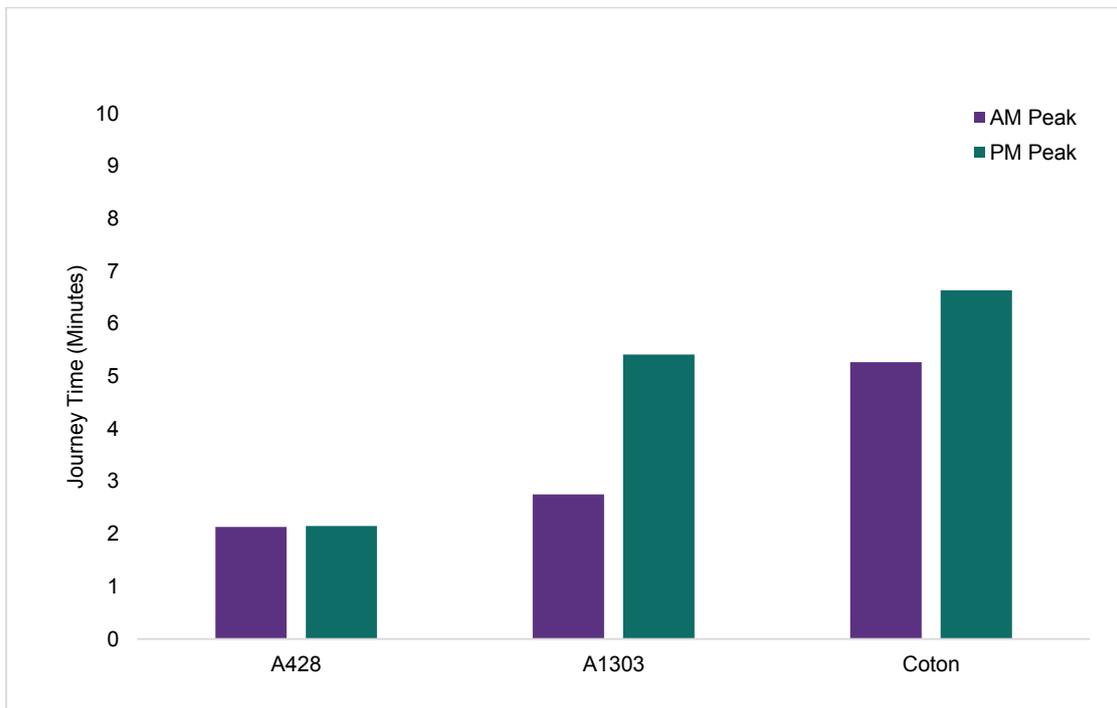

Figure 6. 2031 Do Something A428/A1303 corridor journey times (from Cambridge)

4.4. A14 Proposed Scheme at Girton Interchange

As detailed earlier, in the modelling the A14 scheme was assumed to be completed in 2021.

Figure 7 shows the lane allocations on each of the modelled highway links at the A14 Girton Interchange. The model coding replicates the proposed Highways England A14 design which is shown in Figure 8 and can be found at the following link:

Table 8 presents the AM and PM peak hour actual flow movements in Passenger Car Units (PCUs) at the A428 Girton Interchange between the M11, A428 and A14.

Table 8. Turning movements at the A428 Girton Interchange (actual flow PCUs), 2031 Do Something

| From/To | AM Peak Hour (0800-0900) | | | | PM Peak Hour (1700-1800) | | | |
|----------------|--------------------------|-------|---------|-------|--------------------------|-------|---------|-------|
| | M11 (S) | A428 | M11 (N) | A14 | M11 (S) | A428 | M11 (N) | A14 |
| M11 (S) | 0 | 0 | 2,150 | 1,416 | 0 | 0 | 2,500 | 806 |
| A428 | 0 | 0 | 0 | 1,739 | 0 | 0 | 0 | 1,387 |
| M11 (N) | 3,324 | 0 | 0 | 2,428 | 3,053 | 0 | 0 | 2,736 |
| A14 | 766 | 1,513 | 2,460 | 0 | 1,038 | 1,673 | 3,176 | 0 |

4.5. Cambridge Development Strategy Impact

Section 2.1 of the CSR Modelling Summary Report (RD/Strat/160 & RD/Strat/161) highlights that new households in or near Cambridge use cars less than those in villages or new settlements further from Cambridge: typically there are 6% more extra car trips per household further from Cambridge.

The figure was derived by comparing CSR's projection of the number of additional car trips per additional dwelling added between scenarios. For the Phase 1 scenario where only Village extensions were explored, the number of additional AM car trips per dwelling added was 0.76. For the scenario developing Cambridge fringe sites, this figure of 0.72, which is ~6% lower. Note that these are average rates across all developments added in each scenario, indicating the net impact of a shift in the emphasis of development. So the statement can be clarified as: on average, the scenario with Cambridge fringe developments generated 6% fewer additional car trips per additional dwelling than the scenario assuming only village extensions.

5. Public Transport and Active Modes Assumptions

5.1. Proposed A428 Park & Ride Site

Transport measures included in the 'do-something' option include a new Park and Ride on the A428, as indicated by table B.2. of Appendix B of the CSRM Modelling Summary Report (RD/Strat/160 & RD/Strat/161).

The A428 park and ride site is included in the Phase 2 modelling from 2021 onwards, and in Phase 3 as part of the transport strategy, also from 2021 onwards. The capacity of the car park at the new site is assumed to be unconstrained and no parking charge was assumed. It assumes a ten minute frequency service running between the new site to Madingley P&R where it then joins the existing Madingley Road P&R site route. The fare was assumed to be directly equivalent to that charged at Madingley Road P&R.

Figure 9 below highlights the modelled location of the A428 P&R site. It is located north of the A428, connecting to St. Neots road at the junction with Broadway, and is only accessible from the parallel local road. This was considered an appropriately indicative location, where the impacts of a new Park and Ride on the corridor could be appropriately identified. The actual location of the proposed site is still to be determined.

Figure 9. A428 Park and Ride site location for modelling purposes

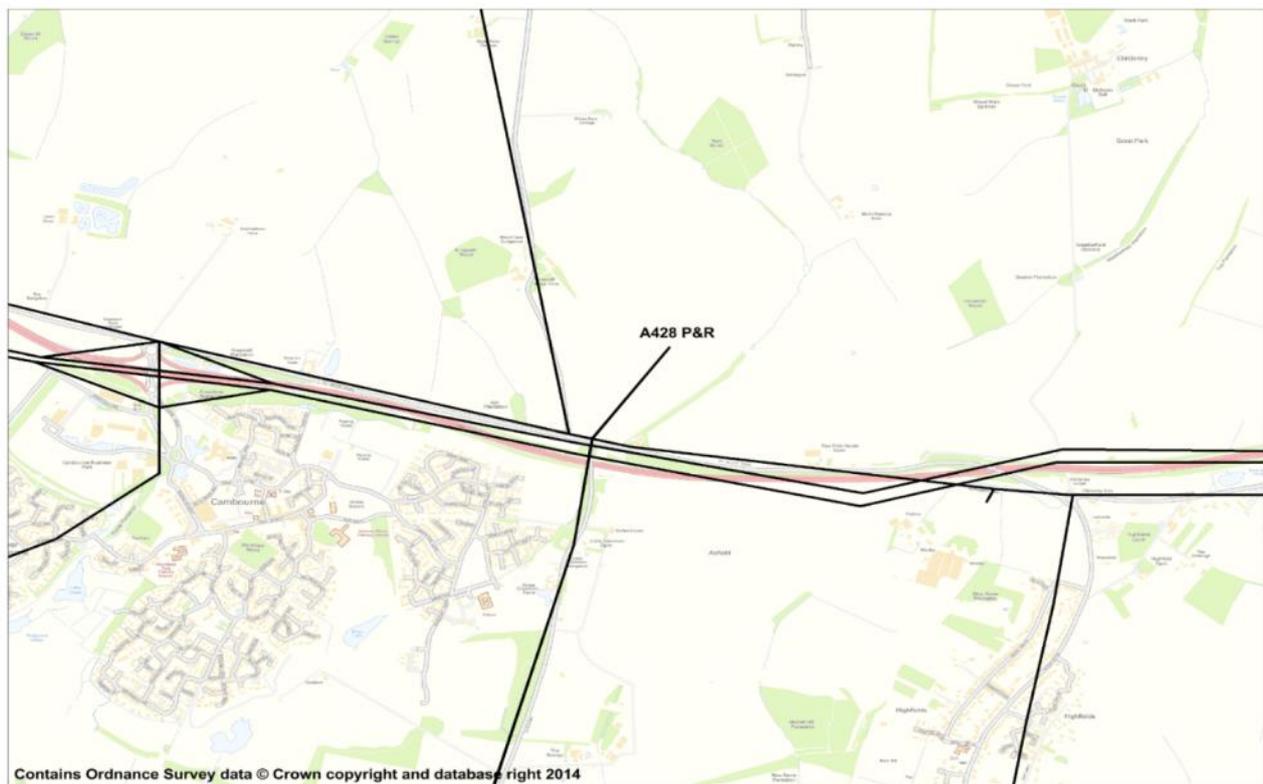

Table 9 indicates the level of demand for A428 P&R services during the AM and PM peak hours. "To Park & Ride Site" refers to the demand flow accessing the A428 site to use the P&R services, whilst "From Park & Ride Site" refers to the demand flow exiting the site having used a P&R service.

Table 9. 2031 Do Something highway model network – A428 P&R Demand Flow (PCUs)

| | AM Peak Hour (0800-0900) | PM Peak Hour (1700-1800) |
|-------------------------|---------------------------------|---------------------------------|
| To Park and Ride Site | 288 | 11 |
| From Park and Ride Site | 13 | 452 |

Of the 288 AM peak vehicle trips, 199 (69%) are made by people living within South Cambridgeshire, and 54 (19%) from Huntingdonshire. In the evening, 293 (65%) vehicle trips are to South Cambridgeshire and 101 (22%) to Huntingdonshire.

5.2. A428 Bus Service

Transport strategy measures included in the ‘do-something’ option include enhancements to public transport measures, including High Quality Public Transport services on the St Neots (A428). This is stated in table B.2. of Appendix B of the CSRM Modelling Summary Report (RD/Strat/160 & RD/Strat/161).

On the A428 corridor (as with the A10 South, A10 North and A1307 South), the introduction of high quality bus services has been modelled by enhancing speed, frequency and the relative attractiveness of services compared with existing bus routes. This did not involve any change to the existing routing or stopping patterns, as such information was not available or appropriate to strategic tests. Instead, the existing service structure was maintained based on the City 1, City 4, 18 and X5 services, with increases in frequency and bus speed.

After comparison of busway speeds (on current Cambridgeshire Guided Busway (CGB)) with the existing services, the journey times on rural corridors were improved by a 40-50% uplift in speed to give an average busway speed of circa 60-65kph (though varying by route section based on current timetabled speeds).

A 10-minute frequency service was assumed, again in line with CGB.

These were intended as broad strategic assumptions which would represent what might be achieved by introducing full segregation and bus-priority measures along the route. In undertaking a more complete design the accessibility from each site (internal routes, bus stop locations and walk times) would be reviewed.

All high quality bus services coded in the model were treated as Guided Bus ways for the purpose of measuring attractiveness. This means that a weighting is applied to time spent travelling by these bus services, relative to ‘normal’ bus services. This approach is quite standard for rail services, where a factor of 0.8 is typically used to represent the greater comfort and ability to use time productively whilst travelling by train. As Guided Bus services also have greater comfort (a smoother ride, wifi internet access and leather seats), a factor of 0.9 has been applied, representing their attraction being part way between that of bus and rail. This factor applies only to the in-vehicle element of the journey. Section 4.9 of the CSRM Model Development and Validation Report (MDVR) provides a complete explanation of how weightings of time are used within the model.

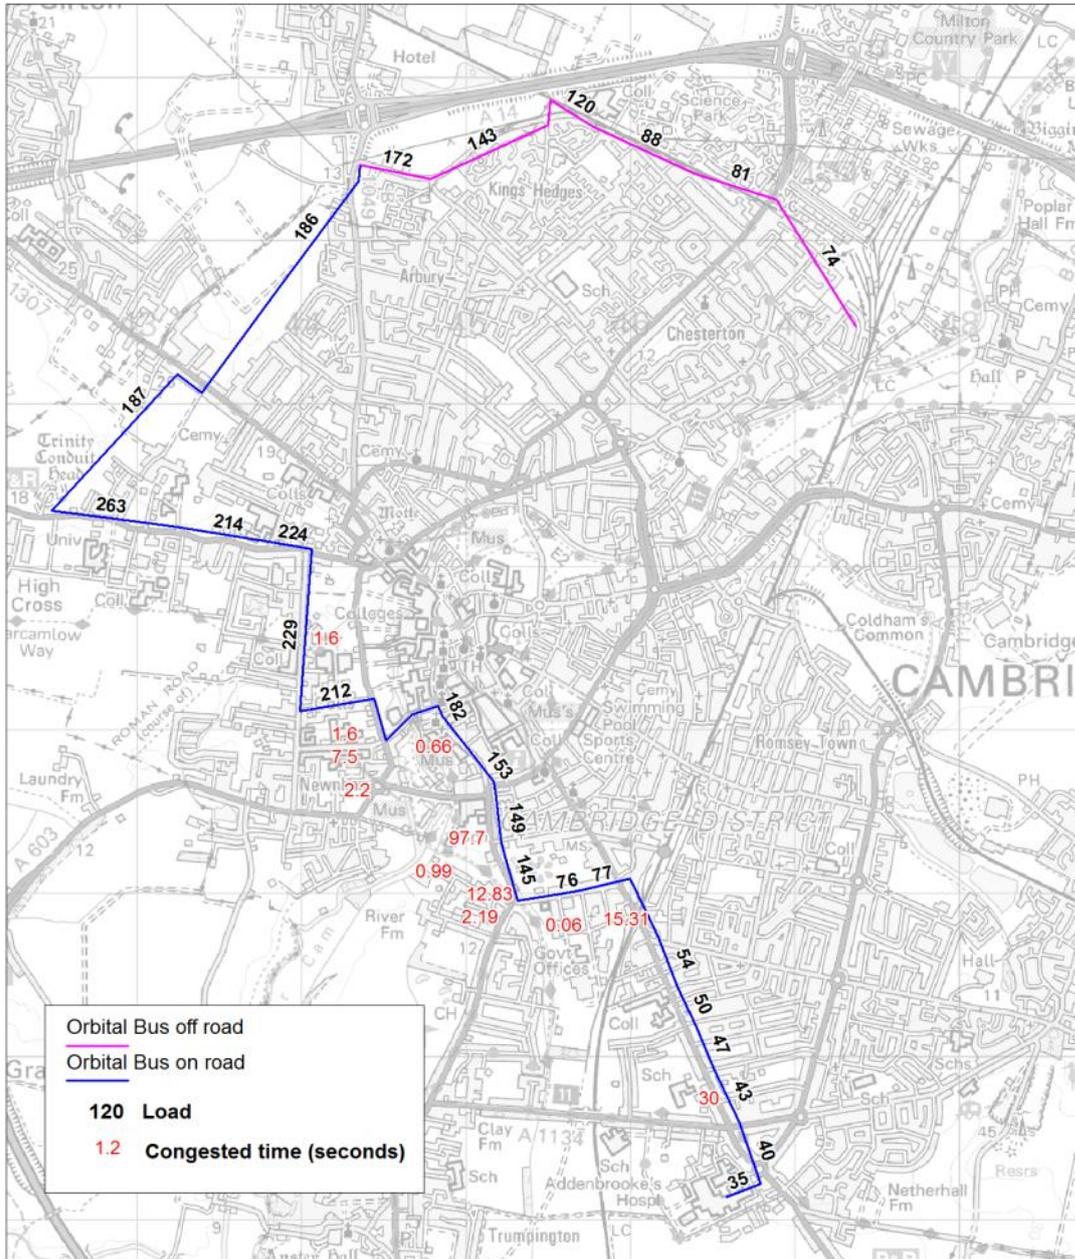

5.3. Western Orbital Bus Service

Transport strategy measures included in the ‘do-something’ option also included an orbital bus service from Cambridge Science Park Station to Addenbrookes, via North West Cambridge. This is stated in table B.2. of Appendix B of the CSRM Modelling Summary Report (RD/Strat/160 & RD/Strat/161). It was also addressed in Supplement 2 (appendix A of this note).

Figure 10 below shows the Western Orbital bus service as coded in the CSRM model. As can be seen, the service is coded to run ‘off road’ (i.e. segregated from traffic) through King’s Hedges and to Histon Road. Though currently coded as ‘on road’ through the Darwin Green and NW Cambridge sites, these sections may when fully planned also include segregation. At present, the remainder of the route is also modelled as non-segregated.

The red figures show the additional journey time added in the model where modelled traffic speed is below the timetabled bus speed. The delays are relatively small on each section, but would clearly accumulate through the journey. It is possible that with improved masterplanning of the North-West Cambridge sites and better interchange this route will ultimately attract more patronage.

Figure 10. Western Orbital Bus Service

6. Other Issues

6.1. Approach to Phase 2

Table 10 below provides further information regarding the Phase 2 modelling runs addressed in section 2.3 of the Modelling Summery Report.

Table 10. Responses to queries on Phase 2 methodology

| | Further information on methodology and data used and assumptions made in the Phase 2 tests: | Response |
|---|--|--|
| a | Was the whole CSRM re-run for the three Phase 2 options or were sub-models run? | The whole of CSRM was run iteratively for each of the Phase 2 development options, with and without the Transport Strategy. These were complete model runs with all functionality used, which is the normal mode of running. |
| b | How was the Village Origin model defined – was this modelled for all villages in South Cambs except Waterbeach and Bourn or was it estimated based on a subset of villages (if so which ones)? | The whole model was run, as in other scenarios. The only differences were in input assumptions, specifically the number of additional dwellings specified in each zone. Inputs were highlighted in the Councils Supplementary Statement to Matter 7 (M7CCC&SCDC – Supplement 2). |
| c | What assumptions does the model make about internalised trips in new settlements compared with village origins? | For internalised trips, the model makes a calculation of the number of internal trips as part of the trip distribution process, based on the relative cost and attractiveness of internal vs external destinations for each trip purpose. Refer to Section 3.8 of the Model Development and Validation Report (MDVR) for more information. |
| | What differences in 'residual disutility factors' are there between Bourn Airfield and village origins? | The residual disutility factors are determined during model validation to replicate the base year conditions. Refer to Technical Notes TN40a and TN48 for more information. |
| d | What geographic area/population was used as the baseline for Bourn Airfield in 2011? | There is no baseline in 2011. The Bourn Airfield zone is largely empty before the development, and trips are generated directly based on the amount of development added. |
| e | Bourn Airfield: How many AM trips by mode were assumed for 2011 and what was the source of these estimates? How many trips were generated by the model for 2031? What were all the destinations for all these trips? | For the first part, refer to (d) above. The response to Actions 8 and 9 should provide the remaining information for both of these questions. |
| f | Village origins: How many AM trips by mode were assumed in 2011 and what was the source of these estimates? How many trips were generated by the model for 2031 | |

6.2. Treatment of Uncertainty

Queries have been raised regarding the treatment of uncertainty in Transport modelling. There is no methodology available to directly estimate the level of uncertainty or probability bounds of model outputs.

Uncertainty arises both from the model, and from the model parameters themselves, and is often dealt with by exploring different growth scenarios and making comparisons based on changing only a small number of input factors.

This is the approach taken in the Local Plan modelling work: by comparing different development scenarios (new settlements vs urban fringe, and with/without the Transport Strategy), any absolute error in the model inputs or outputs is less relevant, and the change between scenarios can then be considered in isolation. Hence the reporting has emphasised the difference between outcomes in the final plan year (2031), with different configurations of housing and transport strategies, to assess how material the differences between these might be.

6.3. Models used for Local Plan Analysis

The Local Plan work was carried out entirely using the CSRМ, as developed by WSP and Atkins on behalf of Cambridgeshire County Council and the Highways Agency. The model used was as described in the October 2009 Model Development and Validation Report and Local Highway Model Validation Report.

In CSRМ, the highway networks and assignment modelling are undertaken using a SATURN highway model, and all other aspects of transport demand, PT, walk and cycle assignment are dealt with by a MEPLAN model.

Appendix A. M7 Supplement 2 – Re-run Modelling

Cambridge Local Plan and South Cambridgeshire Local Plan

Matter 7: Transport

Update on Transport Modelling

Introduction

1. At the Matter 7 Transport Hearing on 18 February 2015, the Councils were asked to provide additional information on the Transport Modelling that was undertaken during the preparation of the Local Plans, using the Cambridge Sub Regional Model (CSRM), in particular:
 - The Validation Report for the CCRM Model.
 - Assumptions used in the model runs referred to in the CSRM Modelling Report (RD/Strat/160)
 - How the Cambridge Western Orbital was applied in the CSRM Model run referenced in the Modelling Report.
2. This supplementary statement provides the information above. It is being shared among other participants at the Hearing.

The Validation Report for the CCRM Model

3. The Cambridge Sub Regional Model (CSRM) is a WebTAG compliant model. This means that it is compliant with government guidance for transport models of this type and has used government guidance and published forecasts to predict patterns into the future. This includes forecast increases in parameters such as fuel price change and public transport fare changes as well as parameters that control traffic forecasts over time such as car ownership trends and corresponding vehicle occupancy trends, allowing for a greater degree of certainty in the modelling outputs. It is monitored and updated periodically to ensure its validity.
4. Two Cambridge Sub-Regional Model Validation Reports are publicly available documents available on the Highways Agency Website. Further information is provided in section 2 of the Technical Note at Appendix 1.

Assumptions used in the model runs referred to in the CSRM Modelling Report

5. The CSRM Modelling Summary Report for Cambridge and South Cambridgeshire Local Plans July 2013¹ details three phases of modelling:

¹ RD/Strat/160

- Phase 1 (Autumn 2012): Seven different scenarios were tested. All included the then committed level of development (planning permissions and sites allocated in adopted local plans - scenario B). The seven scenarios were based on the sites in the Issues and Options 2012 consultation and potential emerging site options that were being tested ahead of Issues and Options 2². The scenarios increased the amount of development at each stage of the development sequence, allowing the impact of different development strategies to be tested.³
- Phase 2 (Spring 2013): Detailed tests were carried out on three short-listed strategic options. In view of the clarity by that time on the strategy for Cambridge, the phase 2 tests focused on strategic options for South Cambridgeshire drawing on site options from the two rounds of issues and options consultations:
 1. village focused development in South Cambridgeshire,
 2. new settlement at Bourn Airfield and
 3. new settlement at Waterbeach.

These tests allowed the different development focuses to be compared, including the potential for mitigation of transport impacts⁴. By this point the decision had been taken that major new development on the edge of Cambridge should be a rejected option, so further modelling of this option was not carried out.

- Phase 3 (Spring 2013): the Phase 3 modelling was to test the emerging Proposed Submission Local Plan scenarios for South Cambridgeshire and Cambridge, together with an enhanced package of transport mitigations, in advance of finalisation of the draft plans (RD/Strat/160, CSRM Modelling Summary Report, Section 2.4). Transport mitigation measures used in the transport modelling reflect those developed for the emerging Transport Strategy for Cambridge and South Cambridgeshire (TSCSC), designed by CCC to address significant known transport issues, and anticipate measures which would be needed to support future growth⁵.
6. The Technical Note provides further information on the scenarios and the assumptions as requested by the Inspector (see section 3 of Appendix 1). At each stage of modelling, assumptions were made regarding the housing and jobs that would take place at different locations across the districts informed by the information available at the time. The Technical Note includes Table 3.1 that provides a synopsis of the inputs to the model runs.

² Note that scenario F included land west of Trumpington Road which following completion of the technical assessment was not included as a site option for consultation.

³ RD/Strat/160, CSRM Modelling Summary Report, Section 2.1

⁴ RD/Strat/160, CSRM Modelling Summary Report, Section 2.3

⁵ RD/Strat/160, CSRM Modelling Summary Report, Appendix B

7. In preparing this note the Councils have noted some inconsistencies with the trajectories used in the Phase 3 modelling:
- Cambridge – the total dwellings modelled at 14,288 dwellings is broadly consistent with, and slightly higher than, the Proposed Submission Local Plan trajectory figure of 14,191 dwellings⁶. However the phase 3 modelling retained two locations for development on the edge of Cambridge from the earlier phases of modelling, namely a site to the west of Trumpington Road and a site south of Fulbourn Road, neither of which were allocated for housing in the Proposed Submission Local Plan or subsequently. Also the Worts Causeway sites (GB1 and GB2) were at the time of the phase 3 modelling identified as appropriate for a lower capacity of 430 dwellings compared with 495 which was the level of development input into the phase 3 modelling. The Proposed Submission Local Plan provided for the balance of dwellings, which had erroneously been retained in the model in the above locations, as being dispersed across the urban area through updated capacity assumptions of sites identified in the Phase 1 model runs and an updated windfall assessment.
 - South Cambridgeshire – the phase 3 modelling includes additional sites that had gained planning permission since the earlier model runs and the allocated sites in the Proposed Submission Local Plan, which along with commitments is broadly consistent with the 19,000 dwelling housing target in the draft plan at 18,663 dwellings. However, the additional year of completions since the earlier model runs (2011-2012 at 696 dwellings) was not included within the Phase 3 model, nor was the future allowance for windfalls as included in the Proposed Submission Local Plan trajectory (2,900 dwellings). As such, the overall number of dwellings included in the phase 3 modelling was not consistent with the trajectory included in the Proposed Submission Local Plan of 22,189 dwellings⁷.
8. These inputs into the phase 3 modelling have been discussed with the County Council and for completeness it is intended that they will be addressed through a rerun of the Phase 3 modelling with the inputs corrected for consistency with the Proposed Submission Local Plans and put before the examination as soon as possible.

How the Cambridge Western Orbital was applied in the CSRM Model run referenced in the Modelling Report

9. Section 4 of the Technical Note at Appendix 1 provides an overview of the assumptions made in the transport modelling supporting the Local Plan regarding the Cambridge Western Orbital public transport route. For the purposes of modelling it assumed improvements to existing routes for bus movements.

⁶ At time of submission the trajectory figure in the most recently published Cambridge AMR was 14,091 dwellings.

⁷ At time of submission the trajectory figure in the most recently published South Cambridgeshire AMR was 22,206 dwellings.

10. It should be noted that the Western Orbital proposals have evolved since the modelling work. The final Transport Strategy for Cambridge and South Cambridgeshire (TSCSC)⁸ describes the scheme as a dedicated bus facility to run parallel to the M11 between junction 11 (Trumpington) and junction 13 (Madingley Road). This would offer greater segregation and more integrated interchange options than assumed in the modelling with likely enhanced public transport modes shares. This is particularly the case when considered together with the A428 Public Transport corridor enhancements, all of which will tend to improve modal transfer.

Technical note

| | | | |
|-----------------|---|--------------|---|
| Project: | South Cambridgeshire Local Plan and Cambridge Local Plan examinations | To: | Cambridgeshire County Council |
| Subject: | CSRM Modelling Information Update | From: | Atkins |
| Date: | 09 March 2015 | cc: | Cambridge City Council and South Cambs District Council |

1. Introduction

1.1. To support the CSRM Modelling Summary Report for Cambridge and South Cambridgeshire Local Plans, Atkins has been asked to identify the planning inputs and network parameters used for each test conducted to support each stage of the analysis. In particular the following information was requested:

- The Model Validation reports for the base year modelling;
- The planning assumptions for each test covering housing and employment allocations alongside specific transport measures; and
- The representation of the orbital bus route from Science Park Station to Addenbrooke's via Cambridge North-West.

1.2. Each of these areas is described in the following sections.

Technical note

2. Model Validation Reports

2.1. The CSRМ has been used extensively for other plan making exercises within Cambridgeshire, for developer related tests of larger sites through Cambridgeshire County Council and by the Highways Agency (HA) as a source of demand forecasts for all current work on the A14 Cambridge to Huntingdon Upgrade which underpins the business case submission and DCO process for this important regional and national highway scheme.

2.2. The CSRМ is supported by two validations reports:

- Transport Demand and Public Transport Model Development and Validation Report (October 2009) – a combined MEPLAN based land use, transport demand and Public Transport assignment model
- Highway Model Component: Model Development and Validation Report (July 2009) – a SATURN based highway assignment model

2.3. These large and detailed documents have been in the public domain since autumn 2013 through the HA website as appendices to the A14 Cambridge to Huntingdon Improvement Scheme Local Model Validation Report:

<http://assets.highways.gov.uk/freedom-of-information/disclosure-log/a14-cambridge-to-huntingdon-improvement-scheme-698600/Local-Model-Validation-Report.pdf>

2.4. Both documents relate to the original base year model formulated to replicate conditions in 2006.

Technical note

3. Input Assumption Ledger for Land Uses

- 3.1. A number of tests were conducted through the three phases of the Local Plan work. These are described in the CSRM Modelling Summary Report for Cambridge and South Cambridgeshire Local Plans July 2013. The Input Ledger shown in Table 3.1 gives a breakdown of the key planning assumptions made for each test together with any transport mitigation assumed for Phases 2 and 3.

Table 3.1: Assumptions for CSRM runs for the City and South Cambs Local Plan Analysis

| Phase | Scenario | Name | Dwellings | | | | Jobs | | | | Transport Tests | | | |
|---------|----------|--------------------------------|------------|-----------|----------|-------|----------|-----------|----------|-------|-----------------|--|---|-----|
| | | | | Cambridge | S. Cambs | Hunts | E. Cambs | Cambridge | S. Cambs | Hunts | E. Cambs | Without Mitigation | With Mitigation | |
| Phase 1 | B * | Committed | | 10512 | 14219 | 9952 | 1594 | 14900 | 22400 | 15100 | 7900 | Chesterton Station 2016, WOTC link 2013, A14 Complementary PT services | n/a | |
| | C * | Within Cambridge Urban area | As B plus | 2098 | 0 | 5641 | 7105 | 14900 | 22400 | 15100 | 7900 | As B | n/a | |
| | D1 * | Waterbeach New Settlement | As C plus | | 4500 | | | 14900 | 22400 | 15100 | 7900 | As B | n/a | |
| | D2 * | Bourn Airfield New Settlement | As C plus | | 3500 | | | 14900 | 22400 | 15100 | 7900 | As B | n/a | |
| | E * | Village extensions | As C plus | | 6130 | | | 14900 | 22400 | 15100 | 7900 | As B | n/a | |
| | F * | Cambridge Fringe | As C plus | | 1678 | | | 14900 | 22400 | 15100 | 7900 | As B | n/a | |
| | F+ * | Cambridge Fringe higher level | As C plus | | 3654 | 348 | | | 14900 | 22400 | 15100 | 7900 | As B | n/a |
| | G | Combination Test (D2, E and F) | As C plus | | 1678 | 9630 | | | 14900 | 22400 | 15100 | 7900 | As B | n/a |
| Phase 2 | 1 * | Village Based | As F, plus | | 5363 | | | 15000 | 22810 | 15100 | 7900 | A14 scheme from 2019 | All schemes in Appendix B except A10 dualling | |
| | 2 * | Waterbeach New Town | As F, plus | | 14273 | | | 15000 | 22810 | 15100 | 7900 | As Above | All schemes in Appendix B | |
| | 3 * | Bourn Airfield New Settlement | As F, plus | | 6713 | | | 15000 | 22810 | 15100 | 7900 | As Above | All schemes in Appendix B | |
| Phase 3 | | Preferred Option | | 14288 | 18663 | 15593 | 8699 | 22100 | 22506 | 15100 | 7900 | As Above | All schemes in Appendix B except A10 dualling | |

- * Phase 1 - B Includes: Cambridge Fringe sites committed in existing plans, and Cambourne (950) and Northstowe (7500)
- * Phase 1 - C Identified SHLAA sites within Cambridge (1258), and windfall allowance (840)
- * Phase 1 - D1 Waterbeach new settlement (4500)
- * Phase 1 - D2 Bourn Airfield (3500)
- * Phase 1 - E All villages Sites identified in South Cambridgeshire Issues and Options 2012 (including Cambourne West)
- * Phase 1 - F Additional sites on Cambridge Fringe - Land West of Trumpington Road (1106), Worts Causeway (495) , Fulbourn Road South (77)
- * Phase 1 – F+ Additional sites on Cambridge Fringe (higher level) – As F plus additional locations on the Cambridge fringe (see below)

- * Phase 2 - 1 NIAB3 (130) Cambourne West (1000), Waterbeach (Barracks Built Area Only) (1090) Northstowe Reserve (900), Village sites focusing on Rural Centres and Minor Rural Centres (2243)
- * Phase 2 - 2 NIAB3 (130) Waterbeach New Town (10,000), Cambourne West (1000), Northstowe Reserve (900), Village sites at Rural Centres and Minor Rural Centres (2243)
- * Phase 2 - 3 Bourn Airfield New Village (3500) Waterbeach (Barracks Built Area Only) (1090), Northstowe Reserve (900), Villages sites at Rural Centres and Minor Rural Centres (1223)

- * Phase 3 Sites reflecting Cambridge and South Cambridgeshire Proposed Submission Local Plans, with completions anticipated at 2031.

Note: Phase 1 F+ was used to test a Cambridge Fringe focused strategy as a comparator. Dwellings were distributed around a range of Green Belt broad locations to deliver around 4000 dwellings, rather than reflecting specific site proposals. These are described by reference to the Broad Locations identified in each Councils' Issues and Options report 2012 (South Cambridge Issue 12 and Figure 4, pages 41 and 42 and Cambridge Issues and Options 2012 Issues 10 to 19, pages 48 to 74):

Broad Location 1 – Land to the north and south of Barton Road (39)

Broad Location 3 – Land West of Trumpington Road (424)

Broad Location 5 – Land South of Addenbrooke's Road (1,502)

Broad Location 7 – Land between Babraham Road and Fulbourn Road (1,212)

Broad Location 8 – Land East of Gazelle Way (754)

Technical note

4. Orbital Bus Route Alignment

- 4.1. Appendix B.2 of the Modelling Summary Report describes “An Orbital bus service from Cambridge Science Park to Addenbrooke’s, via North West Cambridge”.
- 4.2. Figure 4.1 provides a plan of the route as coded in the Public Transport Assignment model. It had been anticipated this would augment the Uni/Citi 4 services.

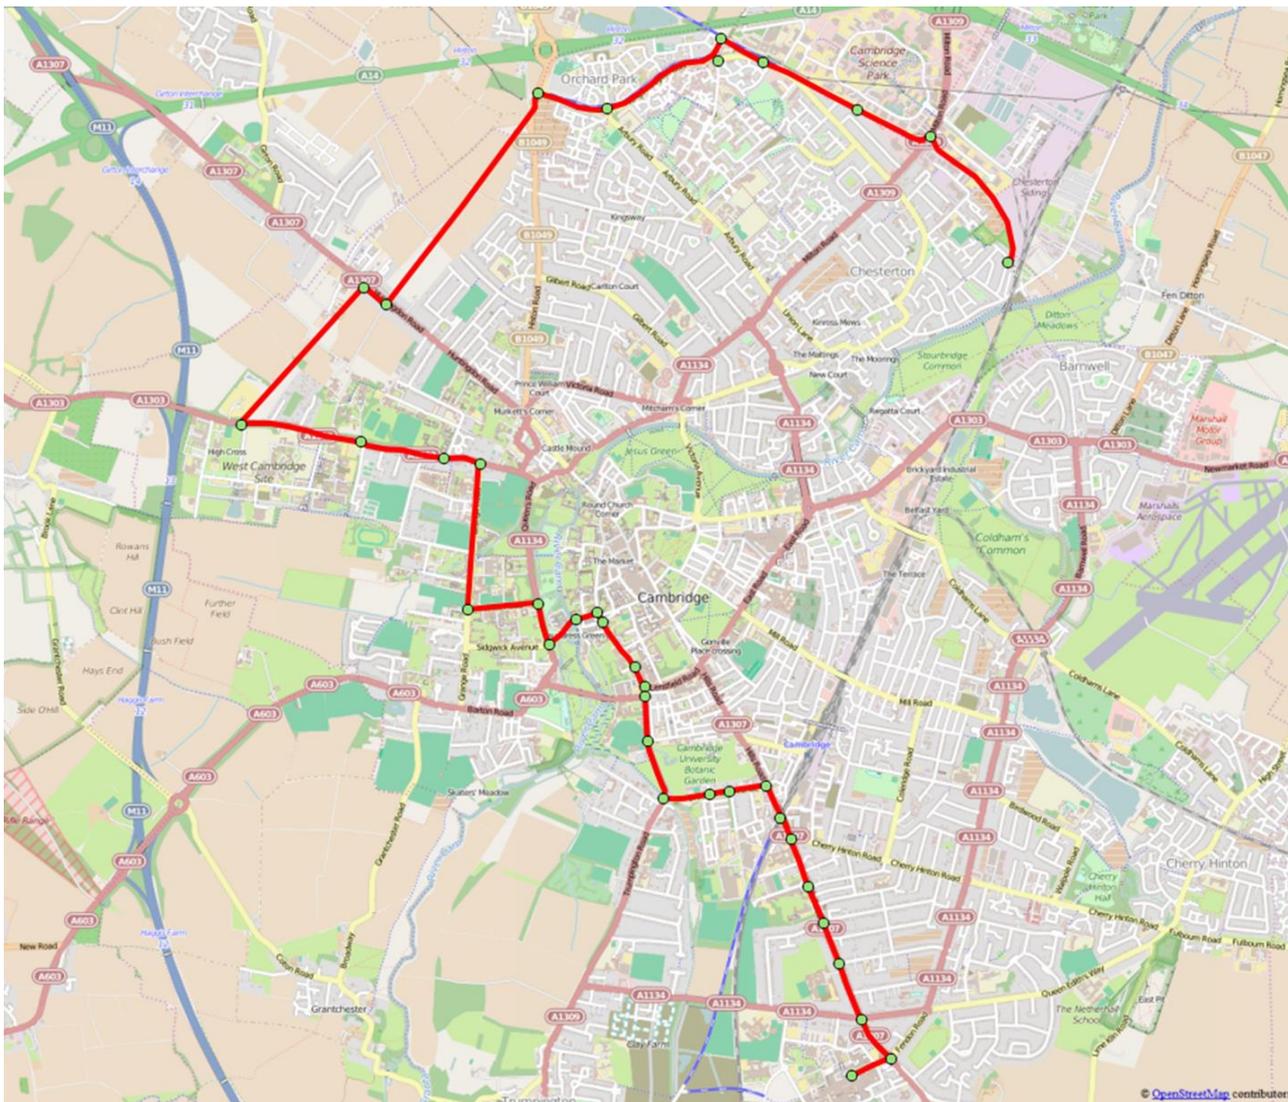

Figure 4.1: Route and Stop location of Orbital Bus Service assumed in TSCSC modelling

Technical note

4.3. Table 4.1 lists service frequency and congested journey times assumed for the service between selected points along the route.

| Modelled characteristic | Assumed Value |
|---|---------------|
| Service Frequency | 15 mins |
| Journey Time: Science Park Station – Cambridge Regional College (CRC) | 2.0 mins |
| Journey Time: CRC - Madingley Road/P&R | 5.2 mins |
| Journey Time: Madingley Road/P&R- Peterhouse | 10.1 mins |
| Journey Time: Peterhouse - Addenbrookes | 10.6 mins |

Table 4.1: Characteristics of Orbital Bus Route Cambridge Science Park Station to Addenbrooke’s

4.4. It should be noted that the final version of the Transport Strategy for Cambridge and South Cambridgeshire Action Plan¹ describes the scheme as a dedicated bus facility to run parallel to the M11 between junction 11 (Trumpington) and junction 13 (Madingley Road). City Deal Schemes are now advancing Western Orbital options that may be able to offer greater segregation and more integrated interchange options particularly with the A428 PT corridor enhancements, all of which will tend to improve modal transfer.

run of Phase 3 Modelling 31 03
2015**

Cambridge Local Plan and South Cambridgeshire Local Plan

Matter 7: Transport

Update on Transport Modelling – Revised Phase 3 Model Run

Introduction

1. Following the Matter 7 Transport Hearing on 18 February 2015, the Councils were asked to provide additional information on the Transport Modelling that was undertaken during the preparation of the Local Plans, using the Cambridge Sub Regional Model (CSRM). A statement was published (M7CCC&SCDC – Supplement 2) which provided information on:
 - The Validation Report for the CCRM Model
 - Assumptions used in the model runs referred to in the CSRM Modelling Report (CSRM Modelling Summary Report for Cambridge and South Cambridgeshire Local Plans – July 2013 RD/Strat/160)
 - How the Cambridge Western Orbital was applied in the CSRM Model run referenced in the Modelling Report.
2. The Statement identified some inconsistencies between the Proposed Submission Local Plans with the housing trajectories used in the Phase 3 modelling. This phase of modelling was used to test the development scenario of the Cambridge and South Cambridgeshire Proposed Submission Local Plans. The Councils have stated that they would commission a rerun of the Phase 3 modelling with the inputs corrected for consistency with the proposed submission plans and put the results of this rerun before the examination as soon as possible.
3. This work has now been completed, and this supplementary statement provides this information. It is being shared with other participants at the Hearing with a view to further discussion taking place to produce a statement of common ground.

Inputs to the revised phase 3 model run

4. The Cambridge Sub-Regional Model (CSRM) phase 3 has been rerun. The only changes made to the Phase 3 modelling described in the CSRM Summary Report are to the housing assumptions to reflect the trajectories. In summary, these changes were as follows:
 - Cambridge – the total dwellings modelled has been revised to reflect the Proposed Submission Local Plan trajectory figure of 14,191 dwellings (rather than 14,288), with the distribution reflecting the trajectory accompanying in the Proposed Submission Local Plan.

- South Cambridgeshire – the total dwellings modelled has been revised to reflect the Proposed Submission Local Plan trajectory figure of 22,189 dwellings (rather than 18,663), with the distribution reflecting the trajectory printed in the Proposed Submission Local Plan. The differences were largely the inclusion of 2,900 windfalls, and one year of completions (for 2011-2012 at 696 dwellings).
5. The additional model run has been added as a row in the table entitled Assumptions for CSRMs runs for the City and South Cambs Local Plan Analysis, that was included in M7CCC&SCDC – Supplement 2 (table 3.1), attached to Appendix 1 of this Statement.
 6. As was done with the original Phase 3, the model was run twice with these revised figures, a ‘do nothing run’ which identifies the transport impacts without mitigation measures, and a ‘do-something run’, which includes the mitigation measures as detailed in Appendix B of the Modelling Report.

Technical Note

7. Atkins and WSP, on behalf of Cambridgeshire County Council, have produced a Technical note describing the revised model runs, and commentary on the differences between the original Phase 3 model run and the revised Phase 3 model run. This is included as Appendix 2 to this Statement.

The CSRMs Modelling Summary Report for Cambridge and South Cambridgeshire Local Plans

8. In order to reflect the revised Phase 3 model runs, a revised version of the Modelling Report has been produced. This has been added to the Reference Documents library, as ‘CSRMs Modelling Summary Report for Cambridge and South Cambridgeshire Local Plans – July 2013 UPDATE MARCH 2015 (RD/Strat/161)’.
9. Where there are changes as a result of the new model runs, these are highlighted, with the new text underlined and the deleted text crossed through. It should be noted that the revisions change a number of the figures in the report, and a number of the tables and graphs have been revised, but as anticipated the majority of the report remains unchanged.
10. The report is a summary of the modelling work undertaken for the Local Plans (it is not a summary of a longer ‘Full’ report, as is clear from paragraph 1.1 of the CSRMs Modelling Summary Report (RD/Strat/160) and as was made clear at the examination hearing on day 14).

Outcomes

11. Cambridgeshire County Council, reflecting the advice of Atkins / WSP, concludes that although a number of figures change, these changes are modest. None of the changes is such as to lead to a need to revise the conclusions within the

Modelling Summary Report nor do these changes undermine the appropriateness of the development strategy contained in the submitted local plans.

12. Cambridge City Council and South Cambridgeshire District Council consider that the development strategy contained within the Submitted Plans remains sound.

Appendix 1: Note to accompany CSRM Phase 3 Rerun

Note prepared by Atkins and WSP | Parsons Brinckerhoff on behalf of Cambridgeshire County Council
27th March 2015

1 Introduction

1.1 Purpose of note

- 1.1.1 This note provides an overview of two additional runs of the Cambridge Sub Regional Model (CSRM), carried out by WSP and Atkins in March 2015. The purpose of the note is to:
- Confirm the changes made to the inputs into the model runs, in comparison to the original 'Phase 3' model outputs reported in July 2013;
 - Identify and comment on the model results and any changes in the outputs, particularly with reference to the charts and information contained in the published Modelling Summary Report (an update for which has been supplied separately) and to identify any implications for the Local Plans.

1.2 Background

- 1.2.1 In 2013, CSRM runs were carried out by WSP and Atkins in support of the development of Local Plans for Cambridge City Council (CCiC) and South Cambridgeshire District Council (SCDC), and incorporating testing of the then emerging Transport Strategy for Cambridge and South Cambridgeshire (TSCSC) prepared by Cambridgeshire County Council (CCC).
- 1.2.2 The final 'Phase 3' model tests were undertaken and reported in July 2013, and were summarised in the Modelling Summary Report¹ for the Cambridge and South Cambridgeshire Local Plans – July 2013. The inputs into the Phase 3 model run were intended to reflect the emerging Proposed Submission Local Plans.
- 1.2.3 As stated in the accompanying covering note, the Councils have identified certain inconsistencies in the Phase 3 model run inputs and a further model run to correct these inconsistencies has been carried out.

1.3 Structure of Note

- 1.3.1 This note is structured as follows:
- Section 2: Information received concerning inputs for model rerun.
 - Section 3: Commentary on revised model rerun results, and comparisons with previous phase 3 model run.

¹ RD/Strat/160

2 Revised CSRM Run Inputs

2.1 Overview

- 2.1.1 The model reruns were undertaken on a 'like for like' basis with those previously reported for Phase 3 work in July 2013, with the exception of inputs concerning the dwelling growth assumptions and distribution to accurately reflect the Proposed Submission Local Plans.
- 2.1.2 This means in particular that the inputs relating to the following remained fixed in comparison to the previous model runs: all highway infrastructure, public transport, walk and cycle infrastructure, employment locations and totals, assumed commuting rates. In addition all housing assumptions related to East Cambridgeshire and Huntingdonshire were as in previous runs.
- 2.1.3 As previously, the identical development assumptions were used in two separate transport scenarios: with/without the inclusion of the transport improvement schemes proposed for the TSCSC.

2.2 Model Rerun Dwelling Assumptions

- 2.2.1 The revised dwelling assumptions were supplied by SCDC and CCiC between 10th and 13th March 2015. The final allocations used for the model rerun were confirmed to SCDC and CCiC by WSP in our spreadsheet 'SCDC and CCiC ScenK2 Dwells Confirmation 130315.xlsx' (issued 13th March 2015)².
- 2.2.2 The table at Appendix 1 summarises the total dwelling development from 2011 to 2031 assumed in the model.

The Councils' supplement 2 statement (M7/CCC & SCDC – Supplement 2) identified at paragraph 7 that for Cambridge a site to the west of Trumpington Road had been included in the original phase 3 modelling inputs even though this site was not an allocation in the then emerging Proposed Submission Cambridge Local Plan. However, while undertaking the phase 3 rerun, it has been confirmed that in fact this site not included in the original phase 3 model run inputs and the dwellings previously attributed to this site were, within the original phase 3 model run, distributed around the city. However, this late change to the original phase 3 model inputs was wrongly not captured in the record of the inputs to phase 3 as included in table 3.1 of the supplement 2 statement hence the explanation given in paragraph 7 of that statement.

- 2.2.3 The principal changes to the rerun model inputs are in summary as follows:
- For South Cambridgeshire, the total number of dwellings has risen from 18,663 in the original phase 3 modelling to 22,189 in the re-run. This is due to additional windfall growth being assumed and a further year of house completions since the earlier runs. The specific model zone has been attributed to 1,000 dwellings (within the original 18,663) which were, in the original phase 3 model input, more generally distributed on a non site specific basis across the district. This change to the inputs more accurately reflects information as the location of committed sites within the housing trajectory. There remain 383 dwellings on small sites which have not been allocated to specific model zones and are treated as windfall (to which see below);
 - For Cambridge City, the total number of homes has reduced from 14,288 to 14,191. Moreover, the number of windfalls within the overall total of 14,191 has increased from 1,550 to 1,850. An alteration to the distribution of dwellings to reflect the proposed submission plan has also been input into the model re-run .
- 2.2.4 As part of the model rerun exercise, WSP also reviewed with CCiC and SCDC the methodology for assigning windfall developments to model zones. In the original model runs it had been assumed that these should be allocated pro rata based on the 2011-2031 development in each zone (i.e. zones with no proposed development would receive no windfall). For the revised run, windfall sites were allocated proportionate to the number of existing dwellings in 2011 in each zone.

² Following feedback from CCiC, 95 dwellings at 379-381 Milton Road were shifted from CSRM Transport Zone 78 to 26.

3 Commentary on Results

- 3.1.1 WSP and Atkins analysed the model rerun results using the same approach to that used in 2013. Checks were carried out to ensure that the rerun results were logical and consistent with the changes to the inputs.
- 3.1.2 The results were reflected within a revision to the CSR Modelling Summary Report, and its accompanying appendices.
- 3.1.3 It is clear from the track changes to the Modelling Summary Report that there are a limited number of changes arising from the phase 3 model rerun. Moreover, it is clear that the changes are not significant in terms of their effect. In general the changes are of a minor nature with a number of figures changing by only 1 or 2 percentage points. The level of change for graphs showing traffic growth and congestion, and car trips to/from Cambridge show a relatively greater change from the published modelling summary report. However, this change is not at a level that leads to a need to change the commentary or conclusions within the report.
- 3.1.4 The modest scale of the changes and their effect are considered to be reasonable given the limited extent of alterations to model inputs. The extent of the change in the modelling results is largely explained by the fact that employment growth assumptions are identical in each run. As each job in the area requires a worker to fill it, the total number of employment related trips is constrained. With more housing in the study area, there is a consequential reduction in the number of in-commuting trips into the study area and some in-commuting trips within the original phase 3 model results are now replaced by local trips, as a result of the increase in housing input into the model rerun.
- 3.1.5 It is considered that none of these modest changes to the model result are such as to lead to a change the overall conclusions set out in the modelling summary report.

Appendix 1: Assumptions for CSRM runs for the City and South Cambs Local Plan Analysis UPDATE

| Phase | Scenario | Name | Dwellings | | | | | Jobs | | | | Transport Tests | |

- * Phase 1 - B Includes: Cambridge Fringe sites committed in existing plans, and Cambourne (950) and Northstowe (7500)
- * Phase 1 - C Identified SHLAA sites within Cambridge (1258), and windfall allowance (840)
- * Phase 1 - D1 Waterbeach new settlement (4500)
- * Phase 1 - D2 Bourn Airfield (3500)
- * Phase 1 - E All villages Sites identified in South Cambridgeshire Issues and Options 2012 (including Cambourne West)
- * Phase 1 - F Additional sites on Cambridge Fringe - Land West of Trumpington Road (1106), Worts Causeway (495) , Fulbourn Road South (77)
- * Phase 1 – F+ Additional sites on Cambridge Fringe (higher level) – As F plus additional locations on the Cambridge fringe (see below)

- * Phase 2 - 1 NIAB3 (130) Cambourne West (1000), Waterbeach (Barracks Built Area Only) (1090) Northstowe Reserve (900), Village sites focusing on Rural Centres and Minor Rural Centres (2243)
- * Phase 2 - 2 NIAB3 (130) Waterbeach New Town (10,000), Cambourne West (1000), Northstowe Reserve (900), Village sites at Rural Centres and Minor Rural Centres (2243)
- * Phase 2 - 3 Bourn Airfield New Village (3500) Waterbeach (Barracks Built Area Only) (1090), Northstowe Reserve (900), Villages sites at Rural Centres and Minor Rural Centres (1223)

- * Phase 3 Sites reflecting Cambridge and South Cambridgeshire Proposed Submission Local Plans, with completions anticipated at 2031.

- * Phase 3 Re-Run March 2015 Sites reflecting Cambridge and South Cambridgeshire Proposed Submission Local Plans, with completions anticipated at 2031 (Higher figures reflect inclusion of windfall allowance, and completions 2011 to 2012.

Note: Phase 1 F+ was used to test a Cambridge Fringe focused strategy as a comparator. Dwellings were distributed around a range of Green Belt broad locations to deliver around 4000 dwellings, rather than reflecting specific site proposals. These are described by reference to the Broad Locations identified in each Councils' Issues and Options report 2012 (South Cambridge Issue 12 and Figure 4, pages 41 and 42 and Cambridge Issues and Options 2012 Issues 10 to 19, pages 48 to 74):

- Broad Location 1 – Land to the north and south of Barton Road (39)
- Broad Location 3 – Land West of Trumpington Road (424)
- Broad Location 5 – Land South of Addenbrooke's Road (1,502)
- Broad Location 7 – Land between Babraham Road and Fulbourn Road (1,212)
- Broad Location 8 – Land East of Gazelle Way (754)

Appendix F. CSRM OD Movements

CCiC and SCDC Local Plan : CSRM Model AM Origin-Destination Movements - Car Trips

See maps of the sector system in Appendix C

Data below represents the CSRM Origin-Destination movements in 2011 to 2031. 2026 and 2031 are shown with/without the Transport Strategy

For simplicity, movements have been summarised into 20 sectors, as shown on a separate map.

Information given is for the wider AM peak (7am-10am).

The car trips include Park and Ride trips, so as to highlight those trips which generate local traffic

The tables below show CAR trips made, measured in PERSONS (i.e. the number of vehicles will be lower where cars are shared. The Highway assignment component of CSRM takes this into account)

Data has been extracted from the Phase 3 re-run undertaken in March 2015 (Scenario K2)

CCiC and SCDC Local Plan : CSRM Model Origin-Destination Movements - Public Transport Trips

See maps of the sector system in Appendix C

Data below represents the CSRM Origin-Destination movements in 2011 to 2031. 2026 and 2031 are shown with/without the Transport Strategy

For simplicity, movements have been summarised into 20 sectors, as shown on a separate map.

Information given is for the wider AM peak (7am-10am).

Public Transport trips include Bus, Guided Bus and Rail trips.

Data has been extracted from the Phase 3 re-run undertaken in March 2015 (Scenario K2)

CCiC and SCDC Local Plan : CSRM Model Origin-Destination Movements - Walk and Cycle Trips

See maps of the sector system in Appendix D

Data below represents the CSRM Origin-Destination movements in 2011 and 2031 with/without the Transport Strategy
 For simplicity, movements have been summarised into 20 sectors, as shown on a separate map.
 Information given is for the wider AM peak (7am-10am).

Data has been extracted from the Phase 3 re-run undertaken in March 2015 (Scenario K2)

| Scenario | Origin | Destination | | | | | | | | | | | | | | | | | | | Grand Total |
